PRODUCT DESCRIPTION

Manufacturer : De lama

Model: DLST/L Class 100

Year : 1992

Type: Dry heat oven for sterilisation and depyrogenation.

Volume: 1 m3

Materials : Polished stainless steel

- Sterilisation (160 - 180°C): Reduction of micro-organisms and their by-products by up to 12 log
- Depyrogenation (220-250°C): Destruction of pyrogens and endotoxins inside materials
- Horizontal laminar flow
- Double door (new)
- Electric heating
- 2 trolleys
- Olympia/EXP3: Control, regulation, management and recording system with high-speed processor.

Possibility of designing the oven to withstand operating temperatures of up to 300°C in continuous service, thanks to the use of HEPA filters with a special sealant.

Main applications :

- empty glassware (e.g. vials, ampoules, bottles)
- stainless steel equipment (e.g. trays, machine parts)
- moisture-sensitive materials
- basic thermostable pharmaceutical products and chemical compounds
- non-aqueous liquids (e.g. oils, glycerines, etc.)
