### ADDITIONAL INFORMATION

Pneumatic conveyor belt. Suction operation for powders or granules.

The Multi-evacuator unit is a combination of blower and cyclone, designed for the suction of granular materials. The upper part, containing the impeller, can be opened for easy cleaning

and replacement of the cyclone filter basket.

The fan creates the necessary vacuum to draw the material from point A and discharge it through the cyclone via a rotary valve to point B, either directly or via a discharge line

Capacity +/- 5 T/h depending on layout (see document).

Motor: 3 kW

Plan to provide a rotary valve. Available at extra cost.
