SKU: 11711 | **Categories:** [Compacting machine / Cosmetic powder press](#), [Packaging machines](#), [Powder press machine](#)

PRODUCT DESCRIPTION

Semi-automatic cosmetic powder press machine (blush / eyelid / foundation)
The machine can compact from 1 to 150 bar for 1 to several seconds up to 10 cycles.
The speed depends mainly on the number of cavities in the tooling. One cycle (manual powder filling + compacting) is about 45 seconds and there are between 9 and 45 cavities per mould (depending on the size of the cups), i.e. between 720 and 3600 products per hour.

Sold without moulds.

Functional equipment, serviced by a specialised company.

Powder hopper

Compacting station with mould positioning (currently without mould)

Support with motorised unwinder for fabric webs

2 buttons for starting compaction, operated by hydraulic cylinder

Demoulding station with suction and heating block (currently without vacuum cleaner)

1 hydraulic pressure adjustment button with control by 1 needle manometer

Hydraulic assembly

Power box

Protective housings + safety sensors

Painted frame

Filling line also available
